Whey powder	99	91	91,9	$\checkmark$
Gouda cheese	± 400	± 385	96,2	$\checkmark$

#### **Market comments**

In general the dairy market has evolved a more supply driven character. The continuing growth of milk output is increasingly crucial for the current price situation. There is weakness in the market.

Notwithstanding recent correction of butter prices ,market for dairy commodities continued to be fairly buoyant. In the butter market prices are consolidating between € 350 and € 360,while in the market for milk powders prices were behaving quite well, but momentum is now fading and prices tend to go down. The question remains by how much. During last couple of months milk powder prices were underpinned by fairly good export demand and shortage of sufficient production capacity. For nearby deliveries factories are restrained to lower their prices too much up to now. However also the cheese market is under severe pressure. Besides higher production figures, import stop for Russia and geo political tensions between Russia and Ukraine with the threat of trade sanctions in the near future are weighing heavily on the current market situation.

In general market sentiment is weakening and uncertainty rising as the seasonal production peak is coming closer. Quotations are under pressure and lower pricing is broadly anticipated..

Also internationally prices are under pressure by growing production volumes and sluggish demand. On the 4 latest GlobalDairyTrade auctions more product is being offered and lower prices are being paid.
